

PROTECTED BY

**FIRST IN THE WORLD
OFFERING AN
ALTERNATIVE ACCESS
SOLUTION.**

Identify Individuals, Eliminate Fraud, Protect Privacy.

b-fy.com

B-FY STOPS ALL CYBERCRIME CAUSED BY ONLINE ID FRAUD AND MOST CYBERCRIME IS MADE BY ONLINE ID FRAUD.

The traditional protocol we all have used for the past 39 years, has unfortunately become a playground for identity fraud. Whilst this protocol is supposed to identify individuals, instead it only identifies fingerprints, facial scans, passwords or other id data, which can be sent by any person on the planet. This allows hackers, impersonators or physical trespassers to access, anytime when someone else's id data is matched.

**THIS IS A VISUALISATION HOW SECURE WE WERE OVER THE PAST 39 YEARS,
ANYONE CAN USE MR SMITH'S KEY, PASSWORD OR BIOMETRICS BECAUSE
ONLINE THIS IS JUST DATA AND WHEN THIS IS MATCHED, IT OPENS THE
GATE TO ANY PERSON ON THE PLANET.**

**THE STATISTICS SHOW 6 TRILLION DOLLARS
PER ANNUM, EVER-INCREASING CYBER
FRAUD-RELATED LOSSES**

A NEW ACCESS PROTOCOL WAS BORN

INSTEAD OF MATCHING ID DATA, B-FY SECURES THE TRANSACTION BY IDENTIFYING THE INDIVIDUAL WHO REQUIRES ACCESS, THIS MAKES HACKING, IMPERSONATING OR PHYSICAL TRESPASSING BY ID FRAUD IMPOSSIBLE.

The person to be identified for access first initiates the connection to establish an online session with the universal identification platform, operating her/his smartphone and its recognition capabilities to complete the identification process. This empowers the universal identification platform, that then, as a service, provides to any given access point, the truly identified individual. This whole process takes less than three seconds.

B-FY offers seven advantages:

- 1) No more ID keys are sent over the internet.*
- 2) Which immediately stops ID fraud.*
- 3) It turns ID theft into a pointless exercise.*
- 4) No more ID keys stored in the database for matching.
No more fines by GDPR non-compliance.*
- 5) This takes the liability away from the database owner for having it protected from ID theft and of becoming a victim of ransomware attacks, etc.*
- 6) The hacking-ratio of people accessing through someone's ID key is 6 billion people, compared to only the one owner operating his/her B-FY identification App.*
- 7) The best feature so far, is the slick customers experience.*

PROTECT YOUR COMPANY, YOUR STAFF, YOUR CLIENTS, AND YOURSELVES BY B-FY.

The B-FY onboard library can simply be integrated in any existing App for any company, organization, staff, and clients that wish to be secure. The installation costs are zero and B-FY is paid per identification, depending on application and frequency thereof it could be as little as cents per identification, a little price to pay for one's freedom from online ID fraud.

ASK YOUR CYBERSECURITY PROVIDER FOR B-FY IMPLEMENTATION

B-FY only wants to identify persons and has no intentions in direct marketing and sales. We want cybersecurity firms and software integrators to become our distributors on a 50/50 revenue split on reoccurring identification charges.

B-FY IS ALREADY OPERATIONAL IN EUROPE AND LATIN AMERICA, THE REST WILL FOLLOW SOON.

This crucial issue we feel obliged to announce urgently is to our governments and their power grids. Some countries nowadays are seriously crippled by not getting their energy provisions; however, this is only a minor issue compared to when power grids are sabotaged through a

catastrophic Cyberwar which can happen any time from now, a ticking timebomb that can affect all of us. These acts committed both by online ID fraudsters or physical trespassers can be terminated by adopting B-FY.
